

DataHaven

SOLUTIONS

DevOps Engineer (MD)

COLUMBIA, MD.

If you are looking for a new opportunity with a **small and growing company** that offers extremely competitive compensation and a spectacular benefits package, then **DataHaven Solutions** might be the place for you. If you want to work for a company where you can **actively participate in shaping the company's direction** and whose **owners are building a company that truly cares about their employees' happiness**, then **DataHaven Solutions** is DEFINITELY the place for you.

We believe that your job is something that should challenge you but also bring you enjoyment. We feel that your employer should support your career goals and nurture growth. If you are looking for a new role or just seeing what is out there, we would love to hear from you.

We are looking for a DevOps Engineer who believes in exploring alternatives and quickly prototyping to validate hypothetical architectures or solutions. The ideal candidate is passionate about the concept of infrastructure as code and leverages modern tools to define, build and manage virtual infrastructure in the cloud.

Will significantly contribute to the development of custom software components and integration of open source code to address complex time series analysis problems through the use of cutting edge Big Data/Cloud technology. Design and implement core architecture and capabilities for software from prototype to operational applications. Must understand software engineering fundamentals, OO programming, relational and time series databases, scripting knowledge and a basic level of development operations (DevOps) skill set. Apply experience working within an AGILE software development life cycle, including requirements creation, sprint planning, and grooming, etc.

Security Clearance:

A **Top Secret** US Government Security Clearance **with (CI) Counter-Intelligence polygraph** is required for this position. **All eligible candidates must have this to be considered.**

Place of Performance:

Columbia, MD.

Required Skills:

- Bachelor's Degree in Information Systems, Computer Science or related discipline is required. Educational requirements may be adjusted for applicable work experience. Work experience may be adjusted for highly specialized knowledge or uniquely applicable experience.
- Must have 5+ years of experience in DevOps Engineering or Software Development (Java preferred).
- Certifications to meet the DOD 8570 IAT certifications (i.e. Security+ or higher level).

- Must have experience with Cloud related technologies such as Hadoop and NoSQL databases (e.g. Accumulo).
- Must have prior experience with Distributed Computing and Big Data.
- Have a solid understanding of Linux systems, hosts, networks, security, applications and proficiency in shell scripting (Shell/Bash, JavaScript, Python).
- Previous experience with Elasticsearch is a plus.
- Excellent oral and written communication skills.

Desired Skills:

- Experience with AWS is highly desired.
- Prior experience or familiarity with our Big Data Platform is a plus.
- Data parsing/transforming techniques to include JSON, XML, CSV formats.
- Understanding of AGILE software development methodologies and use of standard software development tool suites. (e.g., JIRA, Confluence, Github Enterprise, etc.)

Telework:

- Some (33% remote)
